

EXCURSION STUDENTS OF THE DEPARTMENT "STANDARDIZATION AND CERTIFICATION" TESTING LABORATORY

Improving the quality of products is now paid much attention. Difficulty of modern technology, the creation of new products using the latest achievements of science, materials with previously unknown properties, the need to define new specifications require quality equipment, highly skilled workers, and the competent organization of the testing laboratories.

One type of professional activity 5V073200- "Standardization, Metrology and Certification" is the work in testing laboratories. Employees carry out the testing laboratory testing of specific products and issue test reports for certification.

No product testing in a laboratory cannot be obtained any certificate of compliance or other permits which is the basis for the production of products in circulation in the market.

3rd year student majoring "Standardization, Metrology and Certification" visited the testing laboratory «ABBA laboratory» in Astana. The purpose of the tour - to get acquainted with the activities of testing laboratories, instruments and methods of determining the parameters of concrete.
